A lack of oversight and inconsistent implementation of the Department of Defense's (DoD) information security program are increasing the risk of misclassification. DoD's information security program is decentralized to the DoD component level, and the Office of the Under Secretary of Defense for Intelligence (OUSDI), the DoD office responsible for DoD's information security program, has limited involvement with, or oversight of, components' information security programs. While some DoD components and their subordinate commands appear to manage effective programs, GAO identified weaknesses in others in the areas of classification management training, self-inspections, and classification guides. For example, training at 9 of the 19 components and subordinate commands reviewed did not cover fundamental classification management principles, such as how to properly mark classified information or the process for determining the duration of classification. Also, OUSDI does not have a process to confirm whether self-inspections have been performed or to evaluate their quality. Only 8 of the 19 components performed self-inspections. GAO also found that some of the DoD components and subordinate commands that were examined routinely do not submit copies of their security classification guides to a central library as required. Some did not track their classification guides to ensure they were reviewed at least every 5 years for currency as required. Because of the lack of oversight and weaknesses in training, self-inspection, and security classification guide management, the Secretary of Defense cannot be assured that the information security program is effectively limiting the risk of misclassification across the department. To reduce the risk of misclassification and improve DoD's information security operations, GAO is recommending six actions, including several to increase program oversight and accountability. DoD concurred with GAO's recommendations.

1-100. Purpose. This Manual: a. Is issued in accordance with the National Industrial Security Program (NISP). It prescribes the requirements, restrictions, and other safeguards to prevent unauthorized disclosure of classified information. The Manual controls the authorized disclosure of classified information released by U.S. Government Executive Branch Departments and Agencies to their contractors. It also prescribes the procedures, requirements, restrictions, and other safeguards to protect special classes of classified information, including Restricted Data (RD), Formerly Restricted Data (FRD), intelligence sources and methods information, Sensitive Compartmented Information (SCI), and Special Access Program (SAP) information. These procedures are applicable to licensees, grantees, and certificate holders to the extent legally and practically possible within the constraints of applicable law and the Code of Federal Regulations (CFR). b. Incorporates and cancels DoD 5220.22-M, Supplement 1 (reference (ab)).

Marking is the principal way of letting holders of information know the specific protection requirements for that information. Markings and designations serve several purposes: Alert holders to the presence of classified information, information protected under the Freedom of Information Act (FOIA), and technical information with restrictions on its dissemination. Identify, as specifically as possible, the exact information needing protection. Indicate the level of classification and any other markings for control of the information. Give information on the source(s) and reasons for classification or other restrictions. Warn holders of special access, control, or safeguarding requirements. This guide gives Department of Defense (DoD) staff and contractors an overview of the kinds of marking required to protect classified and unclassified controlled information that cannot be disseminated to all audiences. The guide offers an integrated approach to the major requirements for marking and control of information, briefly explaining the reasons for marking and providing examples of correctly marked documents. This guide is not a substitute for training in the major systems of DoD document and data control. If your job includes original or derivative classification, decisions about FOIA exemptions, or management of scientific and technical information, you must attend specialized training.

Sets forth regulations for the entire U.S. Defense Dept. relating to the protection and disclosure of national security information.

The guidance contained is derived from the E.O. 12598, "Classified National Security Information," its implementing instructions, and the marking guide developed by the Information Security Oversight Office. This pamphlet applies to the Office of the Secretary of Defense (OSD), the Military Departments, the Chairman of the joint Chiefs of Staff, the Defense Agencies, and the DoD Field Activities (hereafter referred to collectively as "the DoD Components"). Marking classified information serves several purposes in the Department of Defense. It alerts holders to the presence of classified information, identifying the exact information or portion that needs protection; provides guidance for downgrading and declassification; gives the reason for the initial classification decision; and warns the holders of any special access, controls, or safeguarding requirements. While we can not anticipate every marking situation, this pamphlet provides the basic ground rules that apply to all classified information, regardless of the media used. For specific situational needs, contact your agency's security officer for guidance.
