Development and neurobiology of Drosophila.

The fruit fly *Drosophila melanogaster* has been extensively studied for over a century as a model organism for genetic investigations. It also has many characteristics that make it an ideal organism for the study of animal development and behavior, neurobiology, and human genetic diseases and conditions. There is no multicellular animal whose genetics is so well understood as *Drosophila melanogaster*. An increasing number of biologists have, therefore, turned to the fruitfly in pursuit of such diverse areas as the molecular biology of eukaryotic cells, development and neurobiology. Indeed there are signs that *Drosophila* may soon become the most
