"College Physics is written for a one-year course in introductory physics."--Preface.

With nearly 250,000 sold, Harvey and Paul Deitel's C++ How to Program is the world's best-selling introduction to C++ programming. Now, this classic has been thoroughly updated! The authors have given this edition a general tune-up of object-oriented programming presentation. The new Fourth Edition has a new code-highlighting style that uses an alternate background color to focus the reader on new code elements in a program. The Deitels' C++ How to Program is the most comprehensive, practical introduction to C++ ever published -- with hundreds of hands-on exercises, roughly 250 complete programs written and documented for easy learning, and exceptional insight into good programming practices, maximizing performance, avoiding errors, debugging, and testing. This new Fourth Edition has an upgraded OOD/UML case to latest UML standard, as well as significant improvements to exception handling and operator overloading chapters. Features enhanced treatment of strings and arrays as objects earlier in the book using standard C++ classes, string and vector. The Fourth Edition retains every key concept and technique ANSI C++ developers need to master: control structures, functions, arrays, pointers and strings, classes and data abstraction, operator overloading, inheritance, virtual functions, polymorphism, I/O, templates, exception handling, file processing, data structures, and more. It also includes a detailed introduction to Standard Template Library (STL) containers, container adapters, algorithms, and iterators. The accompanying CD-ROM includes all the code from the book as well as essential software for learning C++. For anyone who wants to learn C++ skills, and master object-oriented development with C++.

Presents basic concepts in physics, covering topics such as kinematics, Newton's laws of motion, gravitation, fluids, sound, heat, thermodynamics, magnetism, nuclear physics, and more, examples, practice questions and problems.
