work named Medusa to simplify programming graph processing algorithms on the GPU. Inspired by the bulk synchronous parallel (BSP) model, we develop a novel graph programming model called "Edge-Message-Vertex" (EMV) for fine-grained processing on vertices and edges. EMV is specifically tailored for parallel graph processing

Medusa: Simplified Graph Processing on GPUs
Medusa offers a small set of user-defined APIs and embraces a runtime system to automatically execute those APIs in parallel on the GPU. We develop a series of graph-centric optimizations based on the architecture features of GPUs for efficiency. Additionally, Medusa is extended to execute on multiple GPUs within a machine.
