Intuitive programming, right on your machine tool Advanced One-Touch (AOT) lets you easily create a program on your Okuma machine tool to optimize your machine's capabilities. AOT allows you to describe part geometry using simple, menu-driven commands. The system then draws the defined shape before developing the complete part program for you.

*Okuma Advanced Technologies | CNC | Productivity*

With Advanced One-Touch IGF, you can create a programme to optimise your machine capabilities. It allows users to describe part geometry using simple commands such as Face/Long/Groove/Thread from which the system draws the defined shape and then develops the complete part programme.

L'objectiu d'aquest text és introduir el lector en els conceptes i les tecnologies que envolten el control numèric (CN) des d'un punt de vista d'aplicació i d'utilització. Es fa una introducció al CN, tant a nivell històric com a nivell d'aplicació, comparant la màquina convencional amb la màquina amb CN. S'exposen les característiques i els elements bàsics de les màquines amb CN, a fi d'entendre el seu funcionament i conèixer les seves possibilitats, i s'introdueixen els conceptes previs que cal tenir clar abans de programar amb CN.

Until now, parametric programming has been the best-kept secret of CNC! This new book demystifies this simple yet sophisticated programming tool in an easy-to-understand tutorial format, and presents a comprehensive how-to of parametric programming from a user's point of view. Focusing on three of the most popular versions of parametric programming - Fanuc's custom macro B, Okuma's user task 2, and Fadal's macro - the book describes what parametric programming is, what it can do, and how it does it more efficiently than manual programming. Along with a host of program-simplifying techniques included in the book, you're treated to descriptions of how to write, set-up and run general subprograms simulate the addition of control options and integrate higher level programming capabilities at G-code level.

This is an exam reading-based book and covers 50 passages about social sciences, science and medical sciences. The passages are classified into three levels: intermediate level, upper-intermediate level and advanced level. • In each reading passage, selected vocabularies are given along with their English and Turkish contextual meanings. • Approximately 200 YDS, e-YDS and YÖKD?L type questions are given • Almost 700 words and expressions are given both below the passages and in the glossary with their English and Turkish contextual meanings.

In 2018 almost half of all vehicles made in North America were produced at foreign-owned plants, and the sector was on track to monopolize the market. Despite this, the industry has been overlooked compared with its domestic counterpart, both in scholarship and popular memory. Redressing this neglect, America's Other Automakers provides a new history of the foreignowned auto sector, the first to extensively draw on archival sources and to articulate the human agency of participants, including workers, managers, and industry recruiters. Timothy J. Minchin challenges the view that the industry's growth primarily reflected incentives, stressing human agency and the complexity of individual stories instead. Deeply human in its approach, the book also explores the industry's impact on grassroots communities, showing that it had more costs than supporters acknowledged. Drawing on a wide range of primary and secondary sources, America's Other Automakers uncovers significant tensions over unionization, reports of discriminatory hiring, and unease about the industry's rapid growth, critically exploring seven large assembly facilities and their impact on the communities in which they were built.
