Principios basicos: Elaboracion de alimentos a temperatura ambiente; Tratamiento termico de los alimentos; Procesos que implican eliminacion de calor; Operaciones post-procesado.

Esta nueva edición aporta una descripción general de los componentes de la ciencia y tecnología de los alimentos, etapas de procesamiento, aspectos importantes de la gestión de la industria alimentaria que no se consideran de otra manera (por ejemplo, gestión financiera, comercialización, leyes de alimentos y regulación de la industria alimentaria), cadenas de valor, la industria alimentaria mundial y consideraciones generales (por ejemplo, problemas ambientales y sostenibilidad). Incluye nuevos capítulos sobre cocción industrial, eliminación de calor, almacenamiento y distribución, junto con actualizaciones en el resto de los capítulos. Estas actualizaciones convierten a este libro como la mejor introducción en un solo volumen a las tecnologías de fabricación de alimentos disponibles, y se mantiene como el texto estándar más seleccionado para muchos cursos de ciencia y tecnología de los alimentos. Puntos clave! Edición actualizada completamente revisada con nuevos desarrollos en todas las etapas de procesamiento y aspectos de la gestión de la industria alimentaria que no se consideran de otra manera (por ejemplo, gestión financiera, mercadeo, leyes de alimentos y regulación de la industria alimentaria).! Introduce una gama de técnicas de procesamiento que se utilizan en la fabricación de alimentos.! Explica los principios clave de cada proceso, incluido el equipo utilizado y los efectos del procesamiento en microorganismos que contaminan los alimentos.! Describe las operaciones de posprocesamiento, incluida la logística de empaquetado y distribución.

Technological Revolutions and Financial Capital presents a novel interpretation of the good and bad times in the economy, taking a long-term perspective and linking technology and finance in an original and convincing way.

How do schools worldwide treat the Holocaust as a subject? Are representations of the Holocaust always accurate, balanced and unprejudiced in curricula and textbooks? This study compares representations of the Holocaust in school textbooks and national curricula. It highlights evolving practices worldwide and formulates recommendations that will help policy-makers provide the educational means by which pupils may develop Holocaust literacy.

Science, technology, engineering, and mathematics (STEM) education is seen by leaders from across the globe as key to economic success and prosperity. –Einstein Fellows attempts to improve the state of STEM education, not only here in the United States, but internationally as well. As the body of STEM-learning research grows, this volume provides the unique perspective of nationally recognized educators who have spent, collectively, more than 400,000 hours at the interface between teaching and learning. Each chapter communicates how its author has implemented a specific STEM practice in the classroom and how the practice might be modified for use in other classrooms, schools, and learning environments. Readers of –Einstein Fellows: Best Practices in STEM Education will gain powerful insight about what really works when it comes to teaching and learning STEM. This publication will serve as an excellent resource for use in any science, technology, engineering, and mathematics teaching methods course; no professional education library, K through college, should be without a copy.

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

The fifth edition of Understanding Central America explains how domestic and global political and economic forces have shaped rebellion and regime change in Costa Rica, Nicaragua, El Salvador, Guatemala, and Honduras. John A. Booth, Christine J. Wade, and Thomas W. Walker explore the origins and development of the region's political conflicts and its efforts to resolve them. Covering the region's political and economic development from the early 1800s onward, the authors provide a background for understanding Central America's rebellion and regime change of the past forty years. This revised edition brings the Central American story up to date, with special emphasis on globalization, evolving public opinion, progress toward democratic consolidation, and the relationship between Central America and the United States under the Obama administration, and includes analysis of the 2009 Honduran coup d'etat. A useful introduction to the region and a model for how to convey its complexities in language readers will comprehend, Understanding Central America stands out as a must-have resource.
