plants by early naturalists: Porifera, Cnidaria, and Ctenophora. Porifera (sponges) and Cnidaria (sea anemones, corals, and medusae) include numerous species, while few species of Ctenophores (jelly combs) have been described. The greater number of the species belonging to these groups is marine based, but a few families of Porifera and Cnidaria are found in fresh water. Porifera are benthic and differ from other metazoans by their lack of true nervous and muscular cells.
