the classroom and laboratory to research in the `real world,' the authors reveal the pitfalls and suggest strategies to overcome problems in the design and planning of applied research. With a focus on how to refine research questions as real world events force deviations from the original research plan, they discuss how to study and monitor program implementation and statistical power analysis. They also explore how to assess the human and material resources that will be needed at different times while conducting an applied research design to facilitate the management of data collection, analysis, and interpretation.

their own professional practice. The growing emphasis on evidence-based practice means that there is an increasing need for practitioners to have at least a basic understanding of research, be aware of methodological pitfalls and to be updated on new methods. This book provides a practical, user-friendly guide to social science research methods for professionals who have benefited from little, if any, formal research methods training but find themselves in a role that requires them to read and understand complex research findings and carry out their own research as part of their professional practice. Practical Research and Evaluation is aimed at practitioners working in education, health, social care and community work. Many in this market are non-graduates or are those whose study did not contain a

research element, but are required to know how research works. This book has three main aims which will benefit this audience - to enable readers to carry out small-scale research projects of their own, provide them with the basic understanding necessary to commission research, and enable them to better understand and evaluate critically research reports. This book is designed specifically for 'Do-it-Yourself' researchers working in the public or voluntary sectors. It is accessible and relevant to practitioners, uses non-technical language wherever possible and employs grounded examples, practical tips, checklists and readings lists throughout.

Well-organized and well-referenced, this book gives a clear

presentation of heuristic methodology as a systematic form of qualitative research. Investigators of human experiences will find this book invaluable as a research guide. The author illustrates how heuristic concepts and processes form components of the research design and become the basis for a methodology. There is a clear explanation of how heuristic inquiry works in practice and the actual process of conducting a human science investigation is described in detail.

Many very intelligent people don't like dealing with numbers. Similarly, many gifted scientists are not especially interested in studying people and their cultural behaviour. In this book, we argue that being interested in people and their cultures, and helping students and others to use numbers to pursue

these interests, are not mutually exclusive. Research methods are becoming an increasingly important requirement for students of all kinds. But many students, particularly those in the humanities, struggle with concepts drawn from the social sciences and find quantitative and statistical information inaccessible and daunting. Nonetheless, such concepts are found in nearly all areas of society, from market research and opinion polls to psychological studies of human behaviour. This book aims to provide a simple guide to the process of conducting research in the humanities, with special reference to media and culture, from the planning stage, through the data gathering, to the analysis and interpretation of results: 'planning it', 'doing it' and 'understanding it'. The book aims to show how students' own

choice of research topic can be refined into a manageable research question and how the most appropriate methodologies can be applied. Each section draws on actual examples from research that the authors and their students have conducted. Topics covered include: choosing a research question and method; instrument design and pilot data; practical procedures; research with children; looking at statistics; and interpretation of results. Features: \*Based on the authors' practical experience as researchers and teachers and is thus accessible, practical and 'how to'. \*Includes students' own work as examples. \*Bridges the 'divide' between social science and humanities research methods and will therefore appeal to a broad range of students and teachers.
